

SOUTHERN LIGHTS BY FLIGHT

INTRODUCTION

Join us on a scenic flight to observe one of the world's most magical natural phenomena—the Aurora Australis, also known as the Southern Lights. On this Southern Lights flight from Melbourne, board your comfortable Qantas Dreamliner in the early evening and travel over the Southern Ocean to the Southern Auroral Zone, returning the following morning.

The Southern Lights are one of the most unique and elusive natural occurrences, so we'll take you far away from light pollution and high above the clouds and weather systems for an unobstructed view of the incredible light display of the Southern Lights, unlike anything you can see from land.

As we fly, we'll watch the vibrant, haunting lights of the aurora as they dance across the sky, changing shape and colour. To the naked eye, the beauty of the auroras most often appear a milky white or occasionally a green shade. But behind the lens, these ghostly curtains can appear green, purple, blue, pink, and red, chemical explosions between the sun's particles and earth's atoms, with your camera able to pick up hues not seen by the eye alone. The shape, movement, and flow of the Southern Lights can change in an instant, each flight different than the last.

The thrill of this spectacular scenic Southern Lights flight begins as you board the flight, joined by expert astronomers, providing information en route about how an aurora is created and pointing out their favourite constellations and night sky objects. We'll also have a professional astrophotographer who will instruct you on how to photograph an aurora and assist on how best to use your camera.

The exact route we take will depend on the activity of the Aurora Australis that night, but regardless of our path, seeing the Southern Lights from the dark night sky, free from any light pollution, is an ethereal, magical, and unforgettable experience.

With several different booking classes, including business, and a seat swapping structure in place to share the best view of this amazing natural display with your fellow passengers, everyone will have ample time to see the lights up close. Two full-service
